

PHA - What Does Good Look Like?

How do you know if your PHA is “good enough”?

Do you struggle to close recommendations after a study or end up digging through the worksheets to figure out why a recommendation was made?

Do you have some team members you can't get to talk and others who want to do all the talking?

Based on RISK's experience with hundreds of PHAs, this webinar focuses on ways to improve the quality of PHAs and PHA documentation so that your team clearly recognizes and understands the hazards they manage.

- Learn best practices for documenting causes, consequences, safeguards and recommendations for robust PHA documentation that makes handling recommendations easier.
- Common issues in PHAs and nuances of documentation - like ways to document non-standard operating modes or multiple consequences from a single cause - to make your PHAs clearer to those who weren't in the sessions
- Soft skills of managing a team, especially for remote sessions.
- Use these best practices to review internal or 3rd party PHAs to make sure you are getting a quality study that improves safety.

Agenda

- OSHA PSM Requirements for PHA
- The Case For Quality
- Developing Causes
- Developing Consequences
- Developing Safeguards & Recommendations
- What Do We Need to get a Good PHA?
- Q&A
- Format: online, 1 hr

*What clients tell us about our PHAs:
"Your team is by far the best I have ever worked with . . . great reviews from the team members, especially the shop floor, which we know is the most important"*

Presenter

Ms. Rene' Murata, CEO/Owner of RISK will lead the presentation. She is an experienced hazard and risk assessment consultant providing technical expertise in process safety and risk management, petroleum, environmental and electrical engineering. She has in-depth experience facilitating PHAs and LOPAs. Process safety became a personal mission when she and her husband worked at the same refinery, and he experienced a serious near miss accident.

Who Should Attend?

PSM managers, process engineers, EHS Managers, . . . anyone responsible for facilitating PHAs and/or managing PHAs and the information from PHAs for your company.
